# Periodic Table

History

How is it organized?

# History of Periodic Table

◆ In the late 1800's, scientists began to try to organize approximately 60 elements but failed because they did not know the structure of the atom.

# History of Periodic Table

## Mendeleev's Periodic Table... Still Growing!

A portrait of Dmitry Mendeleev, a Russian chemist, is centered in the background of the periodic table. The periodic table is a grid of elements, with some cells containing numbers and symbols. The elements are arranged in rows and columns, with some gaps. The elements shown are: H, He, Li, Be, B, C, N, O, F, Ne, Na, Mg, Al, Si, P, S, Cl, Ar, K, Ca, Sc, Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Zn, Ga, Ge, As, Se, Br, Kr, Rb, Sr, Y, Zr, Nb, Mo, Tc, Pd, Ag, Cd, In, Sn, Sb, Te, I, Xe, Cs, Ba, La, Ce, Pr, Nd, Pm, Sm, Eu, Gd, Hf, Ta, W, Re, Os, Ir, Pt, Au, Hg, Tl, Pb, Bi, Po, At, Rn, Fr, Ra, Ac, Th, Pa, U, Np, Pu, Am, Cm, Bk, Cf, Es, Fm, Md, No, Lr, Fl, Uup, Lv, Uus, Uuo.

- ◆ In 1869, a Russian chemist, Dmitry Mendeleev, tried to help his chemistry students and fellow alchemists organize all the known elements by creating the beginning framework of what we refer to as the Periodic Table of Elements.

# History of the Periodic Table

- ◆ After many improvements, additions of elements, and grouping of similar elements, we now have a modern periodic table.

# ORGANIZATION of Periodic Table

🟢 **Periods** – horizontal rows & # of orbitals

# ORGANIZATION of Periodic Table

- ◆ **Groups** – vertical columns & # of valence electrons

# ORGANIZATION of Periodic Table

- 💧 **Atomic #** - increases from left to right
- 💧 **Reactivity vs. Nonreactive**

# ORGANIZATION of Periodic Table

## METALS vs. NON-METALS

- ◆ GOOD conductors of heat and electricity
  - ◆ Solid at room temperature
  - ◆ Malleable and ductile (easily formed into shapes)
  - ◆ Lustrous (shiny)
- ◆ POOR conductors of heat and electricity
  - ◆ Solid, liquid, or gas at room temperature
  - ◆ Brittle (easily breakable)
  - ◆ Dull, but can be colorful

# Periodic Table of the Elements

# Atoms

What is an atom?  
Atomic Structure

Ions, Isotopes, and Valence Elect

How to diagram an atom?

# What is an atom?

- ◆ The basic unit of a chemical element

# Atomic Structure

## Subatomic Particles

- ◆ **Protons** – positive particles
- ◆ **Neutrons** – “neutral” (NO) charge particles
- ◆ **Electron** – negative particles

## Atom Structure

- ◆ **Nucleus** – center of atom, contains proton & neutrons
- ◆ **Orbits/Orbitals** – surrounds the nucleus & the electrons travel around on them

# Key Terms to KNOW

- ◆ **Valence electrons** - # of electrons in the outermost shell
- ◆ **Ion** – charged atom
- ◆ **Isotope** – where protons & neutrons DO NOT equal in the nucleus

# How to Diagram Atom?

- 1 Draw the nucleus and write P for protons and N for neutrons.
- 2 Place the number of protons next to the "P" in nucleus (atomic number).
- 3 Subtract: atomic mass - atomic number for find the # of neutrons AND place that # in next to the N in the nucleus.
- 4 Use the periodic table's group # to determine the # of orbitals and draw them around nucleus.
- 5 Determine the # of electrons:
  - 1 Neutral atom: protons = electrons
  - 2 Ion atom: protons DO NOT EQUAL electrons (*use period # to determine ion charge*)
    - 1 If positive, more protons than electrons
    - 2 If negative, more electrons than protons
- 6 Use electron chart to determine # of electrons on each orbital.
- 7 Determine if atom is an isotope or normal
  - 1 Normal atom = protons and neutrons EQUAL
  - 2 Isotope atom = protons and neutrons DO NOT EQUAL

LET'S PRACTICE ....
